### **Medlite C6 Laser Post-treatment Instructions**

You will need to apply plain petroleum jelly or Aquaphor to the treated spots as they heal. The healing process usually takes up to 10 days.

The crust will then fall off and the treated spot will appear pink which will continue to fade to your normal color.

The area must be protected with daily sunscreen of SPF 30 or higher to prevent recurrence.

You may experience a burning or stinging sensation for up to 2-3 hours post treatment, however most discomfort should resolve within a few minutes after completion of treatment

Improper care can increase the risk of complications

Please notify Dr. George at 910-256-4350, if you experience excessive pain, swelling, blistering, or have any questions or concerns.
